Hazardous Materials Incidents

The River Valley Board of Education recognizes that hazardous materials are used in River Valley School District at times. A hazardous material is defined as a substance or material that, because of its chemical, physical, or biological nature, poses a potential risk to life, health, or property if it is released. For example, internal incidents may include, but not be limited to, activities in a school laboratory, vocational technical area, or maintenance. The Board and Administration, in conjunction with local authorities and Sauk County Emergency Government, have prepared a Crisis Response Plan that includes appropriate response to a hazardous materials incident. This plan is to be followed by all district employees, students and others, should an incident occur.
